DONATION STATION

WHAT'S THE FIRST THING YOU'D TAKE IF YOU HAD TO FLEE YOUR HOME?

Recycling your vape batteries here will directly help refugees

how can you help refugees?

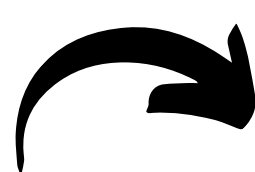

Roots creates ingenious solutions to the ongoing problem of affordable energy for those on the move. We **recycle dead and dying batteries** (18650 lithium ion), found in a multitude of rechargeable objects, (most commonly laptops, vapes, electrical vehicles) and **turn them into power banks** for refugees in Northern France to keep their phones charged

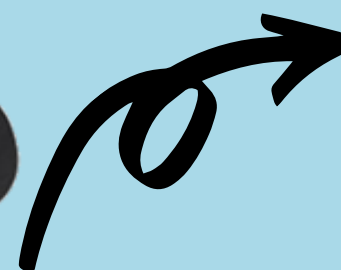

A phone is not only where family photos and contacts are kept, it also provides access to vital aid including food, clothes, shelter and medical care when displaced.

We turn these...

...into these...

...using these!

PLEASE DONATE YOUR OLD VAPE BATTERIES HERE. THANKS!
